

Scotia

Integrated HVAC &
Energy Solutions

Fulfilling your buildings potential

The average public building uses between 50-60% of its energy consumption on heating and cooling itself. ID Scotia is Scotland's leading provider of providing advanced HVAC, mechanical and energy solutions to the educational and university sectors.

With an unmaintained HVAC system using over 60% more energy run than a well maintained system, we focus on offering energy efficient, cost effective heating and cooling solutions that benefit both the client and the environment by designing, installing and maintaining HVAC and mechanical building systems,
